

Keep your home clean of coronavirus

- When a person with coronavirus coughs or sneezes, they may leave the virus on surfaces.
- Cleaning and disinfecting surfaces will help reduce the spread of COVID-19, especially frequently touched public surfaces like door handles, ATM keypads and taxi seats, or surfaces in your home when someone has COVID-19.
- Cleaning will remove the dirt; disinfecting will remove coronavirus.

How to clean and disinfect surfaces:

- Wear gloves when cleaning and disinfecting. If gloves are not disposable, reuse them only for cleaning and disinfecting.
- If surfaces are dirty, first clean with detergent or soap and water.
- To disinfect, mix 6 teaspoons of bleach with 1 litre (4 cups) of water.
- Apply to the surface, leave for 2 minutes, then wipe off with water.

Bleach is poisonous.

- Do not drink bleach.
- Do not mix bleach with other cleaning products.
- Keep bleach away from children.
- Open windows and doors to let fumes out.

When finished, wash your hands well with soap and water for 20 seconds.
